Results **Radio** – 1st Semester 2023

At the beginning of each new semester (half-year period), Mediapulse publishes – as a free service – different figures on the radio consumption of the past half-year.

Contents

• Consumption, total market Switzerland	4
• Consumption per language region	5
• Curve over Half-Year for radio, total market Switzerland	8
• Day pattern for radio per language region	9
• Audience numbers per language region	12
• Day pattern and reach, total market Switzerland	24

Short description of method

The sampling of radio consumption takes place within a panel and is based on the principle of audio matching. A wristwatch serves as the sampling device for participants.

Due to the technological and economical constraints of the research, linear radio consumption via headphones is not taken into account, nor is time-delayed or on-demand consumption of radio services. On the other hand, the consumption of live streaming is logged, provided it does not take place via headphones.

- **Universe:** Persons aged 15 and over in private households
- **Universe size:** ~7.3 million persons
- **Sample size:** 8,836 participants
- **Sampling days:** 304,366, 24 hrs, Mon–Sun
- **Context of consumption:** The audio matching method works as follows: the acoustic environment registered by the sampling device is compared with a reference database of radio stations, which enables the identification of the radio station currently being listened to by the panellists.
- **More information on the method:** www.mediapulse.ch/radio

Notes

^o This change over the same semester in the previous year is significant. Sample interpretation for total radio: the NR % of the current semester (74.27) is outside the confidence interval of the previous semester (74.55 – 75.84), therefore the change is significant.

1) Confidence interval CI (level 0.95). Indicates the fluctuation range of the sampling. Expressed in sampling terms: with 95% probability, the true consumption value is within the specified range.

2) The city of Fribourg is located in the licence area of Radio Freiburg and is considered part of French-speaking Switzerland by the Swiss Federal Statistical Office (SFSO). The total reach of this station corresponds to the sum of the net reaches (NR-T) in the language areas of German- and French-speaking Switzerland.

3) GOAT Radio: until February 2023 20 Minuten. For this reason, no declaration of the significant change over the same semester in the previous year.

4) Flashback FM: until February 2022, Virgin Radio Hits Switzerland. For this reason, no declaration of the significant change over the same semester in the previous year.

Legend

NR % = Net reach in %
 NR-T = Net reach in thousands
 UV = Usage per listener in minutes
 UM = Total consumption in minutes
 MS = Market share

Notes

^o This change over the same semester in the previous year is significant.
 Sample interpretation for total radio: the NR % of the current semester (75.87) is outside the confidence interval of the previous semester (76.13 – 77.50), therefore the change is significant.

1) Confidence interval CI (level 0.95). Indicates the fluctuation range of the sampling. Expressed in sampling terms: with 95% probability, the true consumption value is within the specified range.

2) The city of Fribourg is located in the licence area of Radio Freiburg and is considered part of French-speaking Switzerland by the Swiss Federal Statistical Office (SFSO). The total reach of this station corresponds to the sum of the net reaches (NR-T) in the language areas of German- and French-speaking Switzerland.

3) GOAT Radio: until February 2023 20 Minuten. For this reason, no declaration of the significant change over the same semester in the previous year.

4) Flashback FM: until February 2022, Virgin Radio Hits Switzerland. For this reason, no declaration of the significant change over the same semester in the previous year.

Legend

NR % = Net reach in %
 NR-T = Net reach in thousands
 UV = Usage per listener in minutes
 UM = Total consumption in minutes
 MS = Market share

Notes

° This change over the same semester in the previous year is significant.
 Sample interpretation for total radio: the NR % of the current semester (69.51) is inside the confidence interval of the previous semester (69.29 – 71.53), therefore the change is not significant.

1) Confidence interval CI (level 0.95). Indicates the fluctuation range of the sampling. Expressed in sampling terms: with 95% probability, the true consumption value is within the specified range.

2) The city of Biel is located in the licence areas of BNJ and Canal 3 (French) and is considered part of German-speaking Switzerland by the Swiss Federal Statistical Office (SFSO). The total audience of these two stations corresponds to the sum of their NR-T

3) From January 2022, Swiss programme windows of foreign stations are identified as individual stations

Legend

NR % = Net reach in %
 NR-T = Net reach in thousands
 UV = Usage per listener in minutes
 UM = Total consumption in minutes
 MS = Market share

Notes

° This change over the same semester in the previous year is significant.
 Sample interpretation for total radio: the NR % of the current semester (80.31) is inside the confidence interval of the previous semester (77.44 – 80.43), therefore the change is not significant.

1) Confidence interval CI (level 0.95). Indicates the fluctuation range of the sampling.
 Expressed in sampling terms: with 95% probability, the true consumption value is within the specified range.

Legend

NR % = Net reach in %
 NR-T = Net reach in thousands
 UV = Usage per listener in minutes
 UM = Total consumption in minutes
 MS = Market share

Confidence interval

Mediapulse works with confidence intervals in its sampling and in the publication of the data. This must be factored in when interpreting the data.

Why?

A random sample is used to estimate key parameters in the population (e.g. mean values or net ranges). Thus a sample never delivers completely precise data, but only approximate values for the true value in the population, whereby the confidence interval indicates the precision of the estimated range with a given probability.

Definition

“The random range of values that is determined on the basis of a random sample as the result of an interval estimation for an unknown parameter of a population and that satisfies a specified probability.” (Peter P. Eckstein, Repetitorium Statistik)

Or put another way...

“The confidence interval indicates the range within which there is a high, calculable probability that the true value lies.” (Werner Wyss, Marktforschung von A-Z)

Confidence interval 95%

To calculate the confidence interval, one must first determine the probability with which the true value can be assumed to occur. Mediapulse uses the confidence level of 95% as the probability. This probability is also called the confidence coefficient. If a confidence interval of 95% is given, one can be 95% sure that the true value of the parameter lies within this interval.

Calculation of the confidence interval (general formula)

To calculate the confidence interval, it is necessary to ascertain the distribution function of the parameter in question (e.g. the mean) in the population. Assuming that this distribution is normally distributed, the confidence interval for the mean is expressed with:

$$CI \text{ for } \mu = \bar{x} \pm z * \frac{s_x}{\sqrt{n-1}}$$

CI = confidence interval, \bar{x} = mean value, \pm = upper/lower limit,

z = z-value for the confidence level, s = standard deviation, n = sample size

Further information

About the Semester Publication

Mediapulse publishes Semester Publications in the areas of radio, TV and online.

Starting 1 January 2023, Semester Publications will appear as follow:

- Radio in the second week of January and second week of July
- TV in the third week of January and third week of July
- Online in the fourth week of January and fourth week of July

Further information on the method and the data of the semester publications can be found at www.mediapulse.ch

Further publications

In addition to the Semester Publications on radio, TV and online, Mediapulse is also responsible for the following studies:

- Quarterly Streaming Data Report
- Time Use Study
- Establishment Survey

About Mediapulse

As an independent industry organisation, Mediapulse is charged with collecting data on the consumption of radio and TV programmes as well as online services in Switzerland. This data is considered official currency and is used by broadcasters and programme makers, the advertising industry, government agencies and for research.

As a company with a strong practical focus, Mediapulse seeks to support the Swiss electronic media and advertising market with research services and data products. Modern systems and constant innovations ensure that changes in the consumption of audiovisual media can also be mapped.

Mediapulse stands for a neutral, independent, transparent and scientific approach to media research and is under the supervision of DETEC (OFCOM). A large part of the market is represented on the Board of Directors of Mediapulse AG and the Board of Trustees of the Mediapulse Foundation.
